AI RESPONSE LAB

Sample team verification summary

Illustrative results from a fictional team of 10

All 10 team members completed both checks. The scores show how many answered each skill question correctly on their first attempt.

Skill	Baseline	Follow-up	What to practise next
Spotting a wrong or missing citation	4 of 10	8 of 10	Open the source itself, not a summary of it
Checking figures against the source table	2 of 10	8 of 10	Recalculate any total or percentage before sending
Spotting a suggestion reported as a decision	6 of 10	8 of 10	Ask “where does it say this was agreed?”
Spotting a missing approval step	4 of 10	4 of 10	Point to the wording that authorises a client update before sending it

Priority for the next round of drills

Follow-up scores were higher on three of the four checks. Spotting a missing approval step stayed at 4 of 10. Practise finding the wording in the source that authorises a client update before sending it.

This sample shows how audit results are reported. The scores describe performance on the exercises and are intended to guide training discussions.
